Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Okubo JP60233621 in view of Yokono et al 4714636.

The disclosure of Okubo (figs 5a-b and 6) shows the components of claims 1-4 including a scanning line, image line 25, pixel electrode 26, insulating film 33 over scanning lines, TFT with a gate 22,122 connected to the scanning line, source 25 to image and drain 26 to pixel, where scanning line comprises a first film with a layer over it having an upper surface smaller than the lower surface (see figs 2a-b and 6). The gate is bigger than the semiconductor in plan view (appears to be shown in figs 5-6, however clearly shown in figure 4). Lacking from the English portion of the disclosure is the electrode being aluminum. Yokono et al discloses a substantially similar structure to those shown in Okubo, indicating that aluminum is suitable for making the electrode (col. 4, lines 30-38). Therefore it would have been obvious to one of ordinary skill to employ aluminum as it was suitable for the intended purpose.

Election/Restrictions

Applicant's election with traverse of group in Paper No. 4 is acknowledged. The traversal is on the ground(s) that there is no burden and certain groups require searching the same places as others. This is not found persuasive because the devices all deal with transistors, however different parts, which therefore end up with significantly different searches. Keep in mind there are 1000 subclasses substantially dedicated to transistors, so what part needs to be searched makes a considerable difference. The liquid crystal class, 349, also provides for different searches for the gate verses source drain portions of the transistor.

The requirement is still deemed proper and is therefore made FINAL.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth A Parker whose telephone number is 703-305-6202. The examiner can normally be reached on 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert H. Kim can be reached on 305-3492. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 308-0956.
